Jacoby J.J., Heinisch J.J.;
Jacoby J.J., Heinisch J.J.;
Analysis of a transketolase gene from Kluyveromyces lactis reveals that the yeast enzymes are more related to transketolases of prokaryotic origins than to those of higher eukaryotes.";
Curr. Genet. 31:15-21(1997).
-!- CATALYTIC ACTIVITY: Sedoheptulose 7-phosphate + D-glyceraldehyde 3-phosphate = D-ribose 5-phosphate + D-xylulose 5-phosphate.
-!- COPACTOR: THIAMINE PYROPHARE.
-!- SUBUNIT: HOWODIMER (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE TRANSKETOLASE FAMILY.

-- FORNILO BASSOCIATED WITH GURKEN, PRODUCES A SIGNAL RECEIVED BY
TORPEDO RESULTING IN A SIGNALING PATHWAY THAT FIRST ESTABLISHES
POSTERIOR FOLLICLE CELL FATES AND NORMAL LOCALIZATION OF THE
ANTERIOR AND POSTERIOR DETERMINANTS, LATER THEY ACT IN A SIGNALING
EVENT INDUCING DORSAL FOLLICLE CELL FATES AND REGULATING THE
DORSAL-VENTRAL PATTERN OF EGG AND EMBRYO (BY SIMILARITY).
-- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-- SIMILARITY BELONGS TO THE CORNICHON FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE-2019606; PubMed=10731132; Adams M. The foction of homeobox genes in development and evolution.";

The foct Natl Acad. Sci. US.A. 88:10711-10715(1991).

SPECIFIC TRANSCRIPTION FACTOR WHICH IS PART OF A DEVELOPMENTAL REGULATORY SYSTEM THAT PROVIDES CELLS WITH SPRICTION: SEQUENCE. SPECIFIC TRANSCRIPTION FACTOR WHICH IS PART OF A DEVELOUAR LOCATION: Nuclear.

-I- SUBCELLULAR LOCATION: Nuclear.

-I- ALTERNATIVE PRODUCTS: 2 ISOPORMS; 1 (SHOWN HERE) AND 2; ARE PRODUCTS: 2 ISOPORMS; 1 (SHOWN HERE) AND 2; ARE PRODUCTS TO THE MESENCHYME ALONG THE PROXIMAL-DISTAL AXIS.

-I- TISSUE SPECIFICITY: EXPRESSED IN THE DEVELOPING LIMB BUD WHERE IT ISSUE, BOTH FORMS FOUND IN KIDNEY BUT ONLY ISOFORM I IS EXPRESSED TO SHE MUSCLE.

-I- SUBCELOMMATAL STAGE: EMBRYONIC EXPRESSION INCREASES FROM DAY 9 TO DAY 12 AND THEN DECLINES TO DAY 15.

-I- STMILARITY: BELONGS TO THE ABD-B HOMEOBOX FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. -!- FUNCTION: COULD BE A PECTINOLYTIC ENZYME THAT HYDROLYSES THE ALPHA-L-RHAMNOPYRANOSYL.

GLYCOSLIDIC LINKAGE BY BETA-ELIMINATION, THEREBY GENERATING OLIGOSACCHARIDES TERMINATING AT THE NON-REDUCING END WITH A HEX-4-ENOPYRANOSYLLORDIC ACID RESIDUE.

-!- DEVELOPMENTAL STAGE: EXPRESSED PREPERENTIALLY DURING THE SEXUAL CYCLE AND ESSENTIAL FOR NORWAL SEXUAL DEVELOPMENT.

-!- SIMILARITY: BELONGS TO THE POLYSACCHARIDE LYASE FAMILY 4.
                                                                                                                                                                                                                                                                                                                                                                                                    15-DEC-1998 (Rel. 37, Last sequence update)
